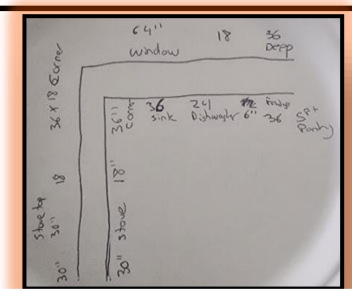
1-hour drawing time included, starting from customers hand sketch and notes. 95. per hour there after, for customers changes for basic 10x10

Conducting a thorough pre-measure with double or triple verification is essential, as well as completing the project measure sheets provided in detail. This approach helps prevent wasted time and saves both you and me money. Additionally, please remember to prepare your wish list, such as specifying all drawer bases (approximately half 3-drawer and half standard), a waste bin cabinet, pull-outs for the pantry, an open-end shelf for decorative items, and any other preferences.

It is important to avoid practices that hinder efficient workflow. While some individuals may feel uncertain about conducting a site measure, please refrain from sending required information to designers via text or messenger. All details should be stored in the customer's folder on our work computer, which allows designers to access notes quickly and efficiently without searching through messages. This approach not only saves time but also upholds professionalism, ultimately benefiting both designers and customers. If you are completing a measurement for the first time, please ask for clarification regarding the specific information needed rather than making assumptions. We provide templates and instructions, including a list of pertinent questions. Email ACK and we will promptly supply you with access to the necessary resources. Including 2-cabinet brochures.



How should one approach this matter?

The upper 36x18 corner could also just be a straight cupboard as the windows opening is on the 18inch side. The 6 inch beside the fridge would be ok to be a filler as well.

Request our complete 21-page information & measurement guide. info@acrosscountrykitchens.ca
